Military Precision

Wit and presence of mind sometimes prevent audacity from giving offense. Speed of Electricity. The speed of electricity is so great that its passage from point to point along a conducting wire may be re-garded as practically instantaneous. Various attempts have been made to measure the rate at which it travels. and observers, with delicate instru-ments, have affirmed that it was not less than III4,000 miles per second and in one or two places its speed as high as 240,000 miles. Such swiftness is in-conceivably great, the mind cannot

contemplate it without staggering.
